

EMMANUEL OLUBUKOLA KOLAWOLE

Data Analyst | SQL • Python • Power BI • Tableau

Liverpool, UK | +44 7979 129028 | emmakola20@gmail.com

[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Data analyst with a quantitative science background and a demonstrated ability to convert large, inconsistent datasets into decision-ready insight for commercial and operational stakeholders. Experienced across the full analytics lifecycle: SQL extraction, data cleaning and validation, dimensional modelling, DAX measure development and dashboard design in Power BI and Tableau. Currently accountable for caseload reporting, performance tracking and data quality across a 100+ case portfolio within a UK government delivery environment. Holds two Distinction-level MScs in applied engineering and science.

TECHNICAL SKILLS

Languages & Querying	SQL (joins, CTEs, window functions, query optimisation), Python (pandas, NumPy, Matplotlib), R
BI & Visualisation	Power BI (DAX, Power Query), Tableau, Excel (PivotTables, Power Query, advanced formulas)
Databases	Microsoft SQL Server, PostgreSQL, MySQL
Analytics Methods	Exploratory data analysis, KPI definition, trend and variance analysis, descriptive & inferential statistics, time-series analysis, root cause analysis
Data Modelling & ETL	Star-schema design, relationship modelling, ETL, data cleaning & validation, data governance, GDPR compliance

PROFESSIONAL EXPERIENCE

Work Coach — Operational Delivery

Aug 2025 – Present

Department for Work and Pensions — West Derby, Liverpool, UK

- Track and report on a live caseload of 100+ claimants, maintaining weekly Excel performance trackers covering appointment adherence, caseload progression and outcome conversion against monthly team targets.
- Analyse caseload data to identify claimants at risk of long-term unemployment, supporting 65 moves into employment or training over 12 months — a 62% outcome conversion rate against a team benchmark of 50%.
- Investigate benefit claim discrepancies by reconciling claimant records across 3 internal systems, resolving an average of 40 cases per month at a 95% first-time accuracy rate.
- Produce monthly performance summaries for team leaders, translating caseload data into the two or three interventions to shift outcome rates.
- Standardise data capture across team records, cutting rework from incomplete or inconsistent entries by 30% and improving month-end reporting reliability.

Data Analyst

Dec 2024 – Aug 2025

Amdari — Remote, UK

- Built interactive Power BI and Tableau dashboards over large multi-table client datasets, consolidating KPIs into single-page stakeholder views.
- Wrote SQL to extract, join and aggregate data across relational tables in each engagement, applying CTEs and window functions to generate quarter-on-quarter and year-on-year comparison metrics.
- Designed data models, authored DAX measures and Power Query transformations, creating reusable KPI logic that reduced new-report build time by 35%.
- Profiled and cleaned raw datasets through deduplication, null handling, type casting and referential integrity checks, raising usable-record rates from 80% to 98%.
- Automated recurring reporting workflows in Power Query, replacing around 3 hours of manual Excel consolidation per reporting cycle and cutting end-to-end reporting turnaround time by 40%.
- Delivered regular written insight reports with prioritised recommendations, enabling stakeholders across projects to make informed, data-driven decisions.

DATA ANALYTICS PROJECTS

NexaCart Global — E-commerce Sales & Customer Analysis

2026

Tableau, SQL · [GitHub](#)

- Identified the driver of a 6.2% revenue decline by decomposing year-on-year sales into price and volume components, redirecting management focus to pricing and product mix.
- Designed a star-schema model over 33,215 records across four tables, joining a central orders fact table to customer, product and revenue dimensions on composite keys to enable order-level time-series analysis.
- Flagged countries with return-rate outliers against an 8.97% company benchmark by building return diagnostics across all fulfilled orders.
- Analysed revenue distribution across SKUs and markets to quantify concentration risk, translating the exposure into prioritised inventory and channel investment recommendations.
- Built an interactive Tableau dashboard consolidating sales, product, regional and customer views, enabling stakeholders to self-serve performance analysis across the full trading period.

Nova Med Solutions — Pharmaceutical Sales & Profitability Analysis

2026

Power BI, DAX, Power Query · [GitHub](#)

- Surfaced an 88% revenue dependency on reseller accounts — \$62.7M of \$71.3M total revenue — through channel concentration analysis, informing a retention strategy to protect the organisation's primary revenue channel.
- Analysed product data to separate high-demand from high-margin products, uncovering the gap between the top-volume and top-revenue lines in the product portfolio.
- Built a Power BI dashboard with drill-through, enabling stakeholders to self-navigate and track revenue, profit, customer statistics and product performance.
- Uncovered seasonal revenue swings through monthly trend analysis, translating them into inventory and campaign planning anchors and enabling proactive resource allocation ahead of demand shifts.
- Cleaned, transformed and modelled raw sales data through an ETL workflow in Power Query, validating record integrity across 16K transactions to ensure reporting accuracy.

Air Source Heat Pump Performance Analysis

2023 – 2024

R, Excel · University of Hull, UK

University research project delivering hands-on experience of the end-to-end data lifecycle on real-world sensor data — problem definition, data collection, cleaning, analysis and reporting.

- Derived reliable Coefficient of Performance (COP) and energy-consumption metrics from high-frequency smart meter and sensor data by imputing logging gaps, removing outliers and correcting clock drift.
- Quantified seasonal efficiency variation against external temperature, establishing the operating conditions under which system performance degraded.
- Specified and configured monitoring instrumentation across residential sites to guarantee consistent, comparable measurement.
- Used R across the analytical workflow — data wrangling, statistical summary and regression of COP against ambient temperature — producing the visualisations and technical report delivered to academic and industry supervisors.

EDUCATION

MSc Renewable Energy — Distinction

2024

University of Hull, UK

MSc Materials Science — Distinction

2018

Obafemi Awolowo University, Nigeria

BSc Engineering Physics — Second Class Upper (2:1)

2014

Obafemi Awolowo University, Nigeria

CERTIFICATIONS

- Google Data Analytics Professional Certificate — Google
- Data Analytics — 10Alytics

EARLIER EXPERIENCE

Creative Designer & Retoucher — TY Bello Photography, Lagos, Nigeria

2021 – 2023

Science Laboratory Instructor & Technical Officer — Kingston College, Ibadan, Nigeria

2018 – 2021
